Office Data Administration System
Description and Engineering

Document Number: 553-3001-352
Document Release: Standard 1.00
Date: October 2003

Revision history

October 2003

Standard 1.00. This document is a new NTP for Succession 3.0. It was created to support a restructuring of the Documentation Library. This document contains information previously contained in the following legacy document, now retired: *Office Data Administration System: Description and Engineering* (553-2721-100).

Contents

About this document

This document is a global document. Contact your system supplier or your Nortel Networks representative to verify that the hardware and software described are supported in your area.

Subject

This document describes the features, programs, and engineering requirements of Office Data Administration System (ODAS). ODAS enables record keeping for telephones and attendant consoles.

Note on legacy products and releases

This NTP contains information about systems, components, and features that are compatible with Succession 3.0 Software. For more information on legacy products and releases, click the **Technical Documentation** link under **Support** on the Nortel Networks home page:

http://www.nortelnetworks.com/

Applicable systems

This document applies to the following systems:

*   Meridian 1 Option 11C Chassis

*   Meridian 1 Option 11C Cabinet

*   Meridian 1 Option 51C

*   Meridian 1 Option 61

*   Meridian 1 Option 61C

*   Meridian 1 Option 61C CP PII

*   Meridian 1 Option 81

- Meridian 1 Option 81C

- Meridian 1 Option 81C CP PII

- Succession 1000

- Succession 1000M Cabinet

- Succession 1000M Chassis

- Succession 1000M Half Group

- Succession 1000M Single Group

- Succession 1000M Multi Group

Note that memory upgrades may be required to run Succession 3.0 Software on CP3 or CP4 systems (Options 51C, 61, 61C, 81, 81C).

System migration

When particular Meridian 1 systems are upgraded to run Succession 3.0 Software and configured to include a Succession Signaling Server, they become Succession 1000M systems. Table 1 lists each Meridian 1 system that supports an upgrade path to a Succession 1000M system.

Table 1
Meridian 1 systems to Succession 1000M systems (Part 1 of 2)

This Meridian 1 system...	Maps to this Succession 1000M system
Meridian 1 Option 11C Chassis	Succession 1000M Chassis
Meridian 1 Option 11C Cabinet	Succession 1000M Cabinet
Meridian 1 Option 51C	Succession 1000M Half Group
Meridian 1 Option 61	Succession 1000M Single Group
Meridian 1 Option 61C	Succession 1000M Single Group
Meridian 1 Option 61C CP PII	Succession 1000M Single Group
Meridian 1 Option 81	Succession 1000M Multi Group

Table 1
Meridian 1 systems to Succession 1000M systems (Part 2 of 2)

This Meridian 1 system...	Maps to this Succession 1000M system
Meridian 1 Option 81C	Succession 1000M Multi Group
Meridian 1 Option 81C CP PII	Succession 1000M Multi Group

Note the following:

- When an Option 11C system is upgraded to run Succession 3.0 Software, that system becomes a Meridian 1 Option 11C Cabinet.

- When an Option 11C Mini system is upgraded to run Succession 3.0 Software, that system becomes a Meridian 1 Option 11C Chassis.

For more information, see one or more of the following NTPs:

- *Small System: Upgrade Procedures* (553-3011-258)

- *Large System: Upgrade Procedures* (553-3021-258)

- *Succession 1000 System: Upgrade Procedures* (553-3031-258)

Intended audience

This document is intended for individuals responsible for configuring Office Data Administration System.

Conventions

Terminology

In this document, the following systems are referred to generically as "system":

- Meridian 1

- Succession 1000

- Succession 1000M

The following systems are referred to generically as "Small System":

- Succession 1000M Chassis

- Succession 1000M Cabinet

- Meridian 1 Option 11C Chassis

- Meridian 1 Option 11C Cabinet

The following systems are referred to generically as "Large System":

- Meridian 1 Option 51C

- Meridian 1 Option 61

- Meridian 1 Option 61C

- Meridian 1 Option 61C CP PII

- Meridian 1 Option 81

- Meridian 1 Option 81C

- Meridian 1 Option 81C CP PII

- Succession 1000M Half Group

- Succession 1000M Single Group

- Succession 1000M Multi Group

The call processor in Succession 1000 and Succession 1000M systems is referred to as the "Succession Call Server".

Description

Contents

This section contains information on the following topics:

Introduction

Office Data Administration System (ODAS) is an optional software package. This feature assists in keeping records of information regarding telephones and attendant consoles.

ODAS allows you to perform the following functions:

- assign a one to six alphanumeric characters station line designator (DES).

- insert the date of all service change activity on the Terminal Number (TN)

- print individual items on individual pages, including system and customer numbers, and a title for each page

- list or count all stations by telephone type, feature type, or both

- list Multiple Appearance Directory Numbers (DNs)

- list hunting patterns for individual DNs

- list telephones in alphanumerical order according to station line designators (DESs)

- enter or change station line designators at an accelerated rate

The following sections describe these features in more detail.

Station line designator

The station line designator (DES) is a one to six character alphanumeric code assigned to individual telephones through overlay programs.

You can use the DES to do the following:

- identify telephones according to a system of numbering and naming that is meaningful to you or the Optivity Telephony Manager (OTM)

- get telephone data block printouts without the need to enter the Terminal Number (TN) or the Directory Number (DN)

You must respond to the DES field when you use LDs 10 and 11 to install telephones. You must respond to the DES field in LD 27 when you install a Digital Subscriber Loop (DSL) data block.

Service activity date

The service activity (ACT) date indicates the last date a service change was performed on a particular Terminal Number (TN). The system automatically enters and updates the ACT date whenever a service change is made. When requested, the system updates the ACT date of all TNs to the present system date. You can use ODAS print programs to print information according to a particular ACT date.

Enhancements to non-ODAS overlay programs

The ACT date is automatically updated to the present system date for analog (500/2500-type) telephones (LD 10), Meridian 1 proprietary telephones (LD 11), attendant consoles (LD 12), Digitone receivers (LD 13), and trunk datablocks (LD 14) whenever a service change is made to the individual TN. It is also updated whenever the ACT date is reset to the present system date through a print program. LD 20 includes prompts for station DES, ACT DATE, and PAGE control. LD 22 includes prompts for ACT date, PAGE control, and reset ACT date. LD 10 and LD 11 include the insertion of a station DES. See *Software Input/Output: Administration* (553-3001-311) for complete information.

Selectable page control

Selectable page control permits individual printouts for each page on standard 11 in. (280 mm) fanfold paper. Each page contains information about the individual item. The printout includes the system and customer numbers as well as the printout title. The customer number appears when requested at the CUST prompt.

ODAS overlay programs

Features print program (LD 81)

The features print program provides a list or count of the number of telephones in your system. The system may be prompted to supply the information based on one or more of the following:

• telephone type

- feature type

- telephone and feature type

- a single customer or a range of customers

- a predetermined service activity (ACT) date

- station line designator (DES)

This program also includes selectable page control and ACT date resetting capabilities.

Multiple appearance and hunt chain print (LD 82)

The multiple appearance and hunt chain print program provides a printout of stations with multiple appearance Directory Numbers (DNs), single appearance DNs appearing on telephones with multiple appearance DNs, and hunting patterns. The system can be prompted to supply the information based on one or more of the following:

- a single DN or a range of DNs

- a single customer or a range of customers

- a predetermined service activity (ACT) date

- station line designator (DES)

This program also includes selectable page control and ACT date resetting capabilities.

Designator sort print (LD 83)

The designator sort print program produces a printout of TNs in DES order. The system can be prompted to supply the information based on the following:

- single line listing of TNs in DES order or a detailed TN print in DES order

- a single customer or a range of customers

This program also includes selectable page control and ACT date resetting capabilities.

Designator entry program (LD 84 and LD 85)

The designator entry program permits entering or changing a DES on analog (500/2500-type) telephones (LD 84) and Meridian 1 proprietary telephones (LD 85) at an accelerated rate. These programs perform an easy change similar to those in LDs 10 and 11. See *Software Input/Output: Administration* (553-3001-311) for complete information.

Call Party Name Display

In LD 95, you can activate the display of the DES for Multiple Appearance DNs. The DES characters are appended to the CPND name for display. Initial CPND name characters can be chopped off in favor of DES characters at the end, when the display cannot accommodate all characters.

Emergency Services Access

On-Site Notification (OSN)

When an emergency call is initiated by a telephone user, the ODAS designator associated with the originating telephone is included as part of the OSN call record sent to the OSN output or maintenance device. The DES is also part of the information shown on the OSN telephone display.

ODAS programs

Contents

This section contains information on the following topics:

Features print program (LD 81)

Prompts and responses for LD 81 appear below.

LD 81 – List or count telephones. (Part 1 of 2)

Prompt	Response	Description
REQ	LST CNT	List or count stations with features.
CUST	xx xx xx <cr>	A single customer. A range of customers. All customers.
DATE	ACT dd mmm yyyy <cr>	TN service changes on or after the ACT date. Print from selected date. Ignore service change date.

LD 81 – List or count telephones. (Part 2 of 2)

Prompt	Response	Description
PAGE	YES <cr>	Page control. No page control.
DES	d...d	Print all telephones with this DES. (Up to 6 alphanumeric characters.)
	d+ + <cr>	Print all telephones with DES starting with d. Print all telephones with no DES assigned. Print data for all telephones.
FEAT	ALL xxxx <cr>	Prints all features. Print the specified feature, see *Software Input/Output: Administration* (553-3001-311). When DATE or DES is answered (above), carriage return means the system searches only for the DATE and/or DES input. If a feature was entered, <cr> means no more features to be entered.
NACT	YES <cr> END	Resets ACT date to present system date. Return to REQ, does not reset date. Exit program. NACT appears after printout is completed.

Table 2 and Table 3 on page 21 list typical printout formats for LD 81.

Table 2
Typical printout of a list of telephones with the Speed Call Controller (SCC) feature (LD 81) (Part 1 of 2)

Feat	Cust	DN	LSN O	TN	Type	Key	DES	Act date
SCC	00	2000	0000	TN 00 0 01 0	500		ABCDA	1 JAN1979
SCC	00	2001	0001	TN 00 0 01 1	500		ABCDB	1 JAN1979
SCC	00	2002	0000	TN 00 0 01 2	500		DEEE	10 APR1979

Table 2
Typical printout of a list of telephones with the Speed Call Controller (SCC) feature (LD 81)
(Part 2 of 2)

Feat	Cust	DN	LSN O	TN	Type	Key	DES	Act date
SCC	00	2003	0000	TN 00 0 01 3	2500		ABCDD	10 APR1979
SCC	00	3000	0002	TN 00 0 04 0	SL1	4	HIB	10 APR1979

Table 3
Typical printout of a count of telephones sorted by feature type (LD 81)

Feature	Customer	Count	Total	SL1	500	2006
ADL	00	CNT	1	1	0	0
AD3	00	CNT	1	1	0	0
AO6	00	CNT	2	2	0	3
ARC	00	CNT	2	2	1	0
PUA	ALL	CNT	3	2	1	0
PUD	ALL	CNT	0	0	0	0

Multiple appearance and hunt chain program (LD 82)

Prompts and responses for LD 82 appear below.

LD 82 – Prompts and responses. (Part 1 of 2)

Prompt	Response	Description
REQ	MAP	Multiple Appearance.
		Print Multiple Appearance DN (MADN) and associated TNs. The hunt pattern displayed shows only the first TN in an MADN hunt group.
	MAG	Multiple Appearance Groups.
		Print Multiple Appearance Groups, including all single appearance DNs assigned on telephones that have Multiple Call assignments.
	HNT	Hunt pattern, single step in either direction.
		Short hunting is not shown.
CUST	xx xx xx <cr>	A single customer. A range of customers. All customers.
DATE	ACT dd mmm yyyy <cr>	TN service changes on or after the ACT date. Print from selected date. Ignore service change date.
PAGE	YES <cr>	Page control. No page control.
DES	d...d	Print all telephones with this DES. (Up to 6 alphanumeric characters.)
	d+ + <cr>	Print all telephones with DES starting with d. Print all telephones with no DES assigned. Print data for all telephones.

LD 82 – Prompts and responses. (Part 2 of 2)

Prompt	Response	Description
DN	x...x ALL <cr>	Single DN or a range of DNs (0–9999999). Print all MAG or MAP DNs. All DNs.
NACT	YES <cr> END	Resets ACT date to present system date. Return to REQ, does not reset date. Exit program. NACT appears after printout is completed.

Typical printout formats for LD 82 appear in Table 4, Table 5 on page 24, and Table 6 on page 25.

Table 4
Typical MAP printout (LD 82) (Part 1 of 2)

MAG [1]	Cust [2]	DN [3]	TN	Note [3]	Type	Key	DES	Act date

Designator entry programs (LD 84 and LD 85)

LD 84 allows the addition of line designators to existing analog (500/2500-type) telephones.

LD 85 allows the addition of line designators to existing Meridian 1 proprietary telephones.

If the telephone is active on a call, the station is disconnected after the last <cr>.

Prompts and responses for LD 84 and LD 85 appear below.

LD 84/LD 85 – Prompts and responses.

Prompt	Response	Description
